Claim Rejections - 35 USC § 103

1. Claims 1-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Firlik et al (7,010,351) in view of Gluck (5,738,625).

Firlik teaches all of the subject matter of the above claims except for the explicit mention of magnetic coils. See for example column 7 which teaches enhancement of cognitive activity due to brain stimulation, and column 10 which teaches the use of fMRI to locate a specific area of the patient's brain that needs to be stimulated. However column 11 of Firlik teaches that it is old and well known to apply magnetic stimulation to the normal locations of the patient's brain. Gluck specifically teaches the use of magnetic coils to stimulate the patient's brain. It would have been obvious to use such coils since the ordinarily skilled artisan would be well aware that coils can produce magnetic stimulation of the type mentioned in Firlik.
